

Trip Drip

Site Design, Product Overview & Test Cases
India-focused travel planning workspace

Trip Drip helps users plan, style, budget, shop for, share, document, and review a trip in one workspace.

1. Site Design Document

Design direction

The product should feel warm, useful, editorial, and practical. It prioritizes clear next actions, local context, progressive detail, offline resilience, and honest labeling of estimates versus live data.

Visual system

- **Colors:** teal, saffron, ivory, slate, sand, forest, crimson, and mist.
- **Typography:** Yatra One for display headings, Poppins for interface text, JetBrains Mono for data and labels.
- **Surfaces:** square or lightly rounded borders, framed repeated records, clear dividers, and restrained shadows.
- **Icons:** Lucide icons with accessible labels and visible keyboard focus.

Application routes

Route	Purpose
/	Landing page
/login, /signup	Authentication
/trips	Trip list
/trips/new	Create a trip
/trips/:id	Trip dashboard
/trips/:id/wardrobe	Wardrobe
/trips/:id/shop	Shopping and comparison
/trips/:id/journal	Journal and photos
/trips/:id/expenses	Expenses

/outfits	Outfit inspiration
/settings	User settings

Responsive and accessibility requirements

- Use readable mobile layouts and horizontal scrolling for wide tables.
- Every control needs a visible label or accessible name.
- Maintain contrast, visible focus, meaningful image alt text, and reduced-motion support.
- Provide loading, empty, error, and offline states.

PDF design

The dashboard's Download Trip PDF action opens the browser print flow. The document includes trip summary, itinerary, transport, hotels, budget, places and notes, and useful emergency information. Interactive map content is represented by readable text.

2. Product and Feature Overview

Authentication

Email sign-up, sign-in, protected routes, session persistence, sign-out, and redirect back to the requested route.

Trip planning

Users provide origin, destination, dates, budget, group size, trip style, preferred transport, and offbeat preference. The system combines itinerary, weather, budget, transport, and hotel results with template fallbacks.

Itinerary and weather

- Day-by-day places, routes, themes, activities, food, transport, and clothing advice.
- Executive budget matrix and per-person estimates.
- Weather conditions, temperature, humidity, and daily context.

Transport and hotels

- Train, bus, car, and flight comparisons.
- One-to-five-star hotel estimates, amenities, recommended tier, and example properties.
- Destination examples such as Mumbai properties near Juhu, Colaba, and Nariman Point.
- Hotel examples are curated and do not guarantee live availability.

Wardrobe and shopping

- Uploaded wardrobe items, colors, images, categories, and suitability.
- Climate collections and Pinterest-style staggered outfit cards.
- Traveler filters for everyone, men, women, couples, and kids.
- Similar clothing search and marketplace links for Myntra, Zara, H&M, Savana, and Meesho.
- Product comparison by price, material, size, shipping, rating, and budget fit.
- Trip cart with quantity updates and removal.

Journal, expenses, collaboration, and offline

- Journal entries with dates, text, location, mood, and photos.
- Group expenses, Hisaab-Kitaab settlement, UPI-oriented flow, and cached expense data.
- Shareable trip links and group missing-item coordination.
- IndexedDB caching for trips, carts, checklists, journal data, expenses, and squad data.
- Chai radar and chat concierge helpers.

Technical stack

React, React Router, Vite, Tailwind CSS, Supabase, IndexedDB, Leaflet, Express-style API handlers, and optional AI integrations.

3. Test Case Document

ID	Scenario	Expected result
AUTH-01	Sign up with valid details	Account is created or confirmation guidance is shown.
AUTH-02	Open a protected route signed out	User is redirected to login.
TRIP-01	Create complete Bangalore trip	Trip saves and dashboard opens.
TRIP-02	Submit missing destination or dates	Validation appears; no incomplete trip is created.
DASH-01	Open Bangalore trip after login	Dashboard renders without a blank page.
DASH-02	Load object-based wardrobe advice	Readable advice appears; no React object-render error.
HOTEL-01	Expand Hotel Comparison	Tiers, prices, amenities, and examples appear.
HOTEL-02	Open Mumbai hotel example	Map search opens safely in a new tab.
OUTFIT-01	Select men, women, couples, and kids	Selected state and context label update.
OUTFIT-02	Find similar clothing	Catalog matches load with scores.
SHOP-01	Add and remove shopping item	Cart count and total update correctly.
JOURNAL-01	Create journal entry and upload photo	Entry and optimized photo appear.
EXP-01	Add group expense	Expense and totals update.
OFF-01	Reload with network unavailable	Cached trip content remains available where supported.
PDF-01	Click Download Trip PDF	Browser print dialog opens.
PDF-02	Inspect saved PDF	Summary, itinerary, transport, hotels, budget, places, notes, and useful information appear.

Regression checklist

- npm run build passes.
- Authentication and protected routes work.

- Bangalore dashboard does not become blank.
- Mumbai hotel suggestions appear.
- Outfit filters and marketplace links work.
- Cart, wardrobe, journal, expenses, collaboration, and PDF actions work.
- No new browser console errors appear during core flows.

Trip Drip documentation · Verify live weather, transport timings, hotel availability, and marketplace prices before travel.
